Strange Problem with Router-Modem (Fritzbox! 7560) that stops working when idle
2020/08/16

I have a Fritzbox! 7560 and have had no issues with connectivity until now (after 4 months). As long as I'm streaming or actively surfing everything is fine (speed, connection, etc.). However, as soon as I stop streaming or surfing, the router will stop and the only way to re-establish the wifi is to restart the router. I was constantly streaming video all day yesterday with no issues. However, as soon as I stopped, after about 10 minutes, the wifi disconnected. This happens at night as well. I've also rebooted the router to factory settings but the issue still occurs. There is nothing in the events log about any error. I've reviewed the settings and the option to stop the connection when idle is not enabled. This has been going on for about two weeks and is a pain. Any tips?

mobile phone jammer Quebec
